

Wonderware Skelta BPM Work Tasks

Wonderware® Skelta® BPM Work Tasks is an easy-to-use mobile application for Wonderware Skelta BPM that allows users to initiate workflow processes on the move and lets them perform their tasks. Work Tasks enables true mobility across the Enterprise with anytime, anywhere access to business processes.

Wonderware Skelta BPM Work Tasks

SUMMARY

Wonderware Skelta BPM's Work Tasks empower users who are on the move to stay connected with their mission critical business processes while ensuring the security of their interactions.

BUSINESS VALUE

- Improved enterprise wide collaboration greatly improves productivity and removes dependency on on-site infrastructure
- Anytime, anywhere access to business processes leading to business agility and faster turnaround
- Secure process interactions ensuring compliance with corporate mandates

Work Tasks is a premium mobile application for Wonderware Skelta BPM. It is designed for the mobile workforce – Enterprise business professionals who use a mobile phone or a tablet device to access their tasks while on the move; or to improve workforce productivity in large or geographically distributed infrastructures or industrial plants. It is an easy-to-use application that provides a quality user experience.

Work Tasks for iOS and Windows devices offers enhanced enterprise mobility and collaboration among stakeholders. With Work Tasks, users Initiate processes and perform tasks using their mobile device. Work Tasks enables true Enterprise Mobility.

Initiate a Process on the Move

The Work Tasks application has an easy to use interface that quickly takes the user to different modules within the application. The application allows users to fill available forms within the application and then initiate a process upon submission – this is a powerful feature that helps improve business agility.

Receive Real-time Notifications

Staying connected to mission critical processes makes it imperative to view and act upon events as they occur. The Work Tasks application displays notifications on all supported devices that display the count of tasks that are pending for action. The application empowers users by allowing them to view, prioritize and act upon important tasks while on the move.

Act upon a Process Related Task

The Work Tasks application is a powerful mobile extension to Wonderware Skelta BPM that delivers true collaboration for distributed teams. Users can act upon urgent tasks and maintain work continuity through the application. The Categories screen helps the user understand the pending approvals, the forms that are in use, the flagged items and any information pertinent to a process being run in the company.

Users can approve or reject a request from anywhere and at any time to ensure optimized work output.

The application also allows users to search old or current work items from any category, allowing cross referencing of tasks to make informed decisions. The search feature ensures that items are fetched from both the Server as well as from downloaded work items.

> Categories screen helps users understand pending approvals

Wonderware Skelta BPM Work Tasks

Connectivity

The Work Tasks application allows Work items that are downloaded on to the device to be viewed offline in the event of loss of connectivity or unavailability of an internet connection. Users can continue to review and make process related decisions. Logging into the application then loads the latest work items.

Work Tasks is a premium app for mobile devices, and is available for iOS and Windows platform. You can download the application from the App Store or the Windows Store based on your requirement.

- Apple iPhone/iPad
 - OS Version: iOS 5.1, 6.0, 6.1 , iOS 7.x and 8.x
- Windows RT and Professional
 - OS Version: Windows 8.0, 8.1

iOS Platform

The Work Tasks application is installed by downloading from the iPhone App Store. The Work Tasks icon is then displayed on the device screen. After configuration, the Work Tasks application allows you to view and act upon work items assigned through workflows.

Details

Unavailability of Raw Materials
Sep-15, 11:27:30

Chemical Plant C has a shortage of raw materials (silver, copper, platinum) under the Catalysts section. This will increase the heat inside the chemical reactor and would slow down formaldehyde synthesis. Please approve this order at the earliest in order to avoid any impact on productivity.
